

# Illinois Traffic and Pedestrian Stop Study

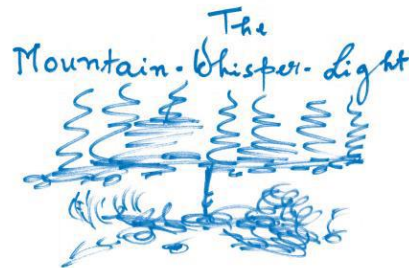

2022 ANNUAL REPORT: TRAFFIC STOPS

## Part II Detailed Tables

Prepared for the Illinois Department of Transportation

By

The Mountain-Whisper-Light: Statistics & Data Science

In Cooperation with SC-B Consulting, Inc.

## **Acknowledgements**

The Mountain-Whisper-Light, Inc. and SC-B Consulting, Inc. gratefully acknowledge the contributions of Jessica Keldermans (Bureau Chief) and Sean Berberet, Bureau of Data Collection, Illinois Department of Transportation, and their associates at IDOT. Ms. Keldermans and Mr. Berberet offered important support frequently throughout the study period. Many thanks to the office of the Illinois Secretary of State for providing summary statistics on drivers' licenses (without any personally identifying information). We are also grateful to the law enforcement agencies and their staff for their diligence and patience in collecting and processing the data used in this study.

## *Traffic Stops: Agency Tables*

The following section comprises tables summarizing Illinois 2022 traffic stop data.

A summary of Illinois statewide traffic stops appears first followed by 1) statistical summaries for each agency in alphabetical order, 2) a table listing median durations of traffic stops by agency, 3) a table listing agencies that reported zero stops, 4) a table listing agencies that reported incomplete data, and 5) a table listing non-compliant agencies.

Each law enforcement agency that supplied 2022 stops records was provided an advance copy of their tables to review and provide feedback prior to the study team's completion of this final report. The agencies were invited to comment on the tables and the following 12 agencies did provide comments on their traffic or pedestrian tables:

BOURBONNAIS POLICE  
DOWNERS GROVE POLICE  
GLENCOE DEPT. OF PUBLIC SAFETY  
GURNEE POLICE  
ILLINOIS STATE POLICE  
ILLINOIS STATE UNIVERSITY POLICE  
(Pedestrian tables only)

LASALLE COUNTY SHERIFF  
METROPOLIS POLICE  
MORRISONVILLE POLICE  
NORMAL POLICE  
ROCKTON POLICE  
SOUTH PEKIN POLICE

Each agency's comments appear in this document following their statistical tables. The comments are reported as received, without any editing. The study team appreciated receiving the feedback and studied the comments in detail. Comments from three agencies (Glencoe Dept. of Public Safety, Gurnee Police and Normal Police) expressed some concern about the estimated driver benchmark population in their tables of traffic stops. We have provided some additional notes in response to these concerns. For each of the three agencies their comments appear after their statistical tables and the response from the statistical team is placed after their comments.

Readers are urged to read **Part I** of this report, the **Executive Summary**, a separate document. **Part I** is a guide to the use of the tables and explains how all the numbers were derived. **Part I** also includes technical appendices, which may be of interest to those who seek a deeper understanding of the methodology.

Summary of Traffic Stops for 2022 - ILLINOIS STATEWIDE RESULTS						Benchmark: Crash-based*
	White	Black or African American	Hispanic or Latino	Asian	American Indian or Alaska Native	Native Hawaiian or Other Pacific Islander
<b>Panel: 1 Summary of Traffic Stops, Rates, and Rate Ratios with 95% Confidence Intervals. Total stops: 2,012,124. Total benchmark population: 9,481,015.</b>

**Comments Provided by the Law Enforcement Agency - GLENCOE DEPT. OF PUBLIC SAFETY**

Thank you for the opportunity to provide feedback for the 2022 traffic stop data summary. The guide document indicates that the benchmark data are estimates based on population of cities and counties. It also acknowledges a limitation in that the boundaries of cities and counties may not fit the actual of residence of drivers that are encountered by a specific law enforcement agency. Glencoe Public Safety considers this to be a significant issue that likely invalidates some of the calculations.

Glencoe has two State roadways running through town as well as a major interstate expressway on our western border. Also, Glencoe is the home of the Chicago Botanic Garden – drawing more than 800,000 visitors per year; 64% of their visitors come from 10+ miles from Glencoe. Glencoe is at the northern edge of Cook County sharing a border with Lake County. The traffic volumes generated from heavily travelled roadways and the Botanic Garden, including greater Cook and Lake County residents travelling through Glencoe, should be considered for any benchmark population calculations to better represent the diversity of drivers travelling through our community.

For these reasons, we believe that the benchmark data used to create the 2022 traffic stop summary does not reflect the actual driving population of the Village of Glencoe. Glencoe Public Safety shares with all Illinois law enforcement agencies the goal of providing the most accurate data as possible. However, unique demographic and transportation factors must be considered to accurately calculate the benchmark population figures for the Village of Glencoe. More accurate data will allow us, as an agency, to determine if there are any specific areas that may require further consideration of potential traffic stop disparities.

**Response Provided by the Study Team**

We thank the Glencoe Department of Public Safety for their careful review and thoughtful comments.

We are providing some additional detail on the benchmark calculations for added context. Part I Appendix C of this report describes the calculations in detail. Limitations are also discussed in Part I of the report.

The benchmark driving population for the Glencoe Department of Public Safety was calculated from demographics from not only Glencoe but also the surrounding area, using ZIP-code-level demographics provided by the U.S. Census Bureau. There were not enough traffic crash reports available to base the benchmark on driver addresses from crashes (one objective way to determine where drivers in the area are from). Instead, as we did with other agencies without enough crashes available, we combined demographics from the surrounding area, weighted by distance. The distance weighting was based on values estimated from agencies with similar population densities, though we acknowledge this does not explicitly account for special features of the locality such as a popular tourist attraction like the Chicago Botanic Garden.

Based on the distance weighting used, it is estimated that 27% of the driving population is from greater than 10 miles of Glencoe. This differs from the agency's expectation of that 64% is from greater than 10 miles of Glencoe based on visitors to the Chicago Botanic Garden. However, 38% of reported stopped drivers in 2022 were from greater than 10 miles of Glencoe, which is more similar to the estimated driving population used for the benchmark.

We also share the goal of providing the most accurate data as possible and we strive to refine and improve the traffic and pedestrian stop benchmarks each year.

**Comments Provided by the Law Enforcement Agency - GURNEE POLICE**

This out of state vendor has elected to use our community's estimated driving age population as a benchmark for field interview analysis. This leads to an inaccurate comparison for demographics. The Village of Gurnee has a population of close to 31,000, yet welcomes over 24 million visitors a year to Six Flags Great America, Gurnee Mills Mall, Great Wolf Lodge Resorts as well as numerous other hotels, entertainment and retail locations.

**Response Provided by the Study Team**

We thank Gurnee Police for their careful review and thoughtful comments.

We are providing some additional detail on the benchmark calculations for added context. Part I Appendix C of this report describes the calculations in detail. Limitations are also discussed in Part I of the report.

The driving population benchmark for Gurnee is based on traffic crash reports rather geographic proximity. We use these reports to get a relatively objective assessment of where drivers in the area reside and combine demographics from those ZIP codes according to their representation in the crash reports. This method is not without limitations, however, as discussed in Part I of the report.

Ultimately our goal is provide the most accurate data as possible, within the constraints of our available data, and we strive to refine and improve the traffic and pedestrian stop benchmarks each year.

**Comments Provided by the Law Enforcement Agency - ILLINOIS STATE POLICE**

The Illinois State Police (ISP) remains committed to making Illinois roadways safe for all drivers. Through traffic stops and consent searches, the ISP is taking illegal weapons and other illegal substances off roadways in Illinois, making travel safer.

The ISP continues to build on the progress made since the implementation of the Traffic Stop Statistical Study in 2004. ISP leadership evaluates the data captured each year, ensures all officers are trained on constitutional policing, and provides comprehensive supervision to ensure compliance.

The ISP will continue to focus training on equitable treatment of drivers and ensuring the rights of all persons are protected.

**Comments Provided by the Law Enforcement Agency - METROPOLIS POLICE**

One thing that's always troubled me when I enter these is not having the option to put if the citation was written for something other than the reason for the stop. My main example being, if there was a white driver and black driver both stopped for speed and they both got written warnings for speed, if either of them ended up with a citation for something like no insurance, there's no way to indicate that. You indicate the result was a citation but can't say what for. Maybe I'm missing something, but that's always seemed to me that the results aren't completely accurate for that reason.

<b>*Benchmark Definition</b> Benchmark Type: Crash-based (863 crash reports used). Primary Benchmark Area (City): Normal. 38.8% of the benchmark comes from zip codes within the primary area. 95.0% of the benchmark comes from zip codes within 119 miles of the primary area, including the primary area.						

**Comments Provided by the Law Enforcement Agency - NORMAL POLICE**

The analysis presented by IDOT does not provide an adequate benchmark of the actual driving population in this community. The driving community in the Town of Normal is an extremely diverse population that is not accurately reflected in the assigned benchmark population. The mix of large employers in the private sector, multiple Universities and Colleges along with the convergence of Interstates 74, 55 and 39 create a unique transient driving population that is not represented in the benchmark population assigned to our agency.

Analysis of the resident data submitted to IDOT for this study shows approximately 50% of the stops involved drivers with a residence outside of the immediate communities in our Benchmark population, and only 25% from the zip code of this jurisdiction. The analysis presented this year utilized crash report benchmarks to determine benchmark population for minority drivers. The crash reports identified in our study included less than 1% of the benchmark population (863 crashes for a benchmark population of 133,349, or 0.65%). The benchmark indicated that only 38% of the subjects were residents of this zip code, while 95% were within 119 miles of this zip code – effectively including most of the State of Illinois from our location in Central Illinois. The zip codes utilized to determine which areas to include in the benchmark and what weight to assign to each zip code included only not-at-fault drivers involved in 2 vehicle accidents.

This methodology effectively excludes the population that would be at greatest probability of involvement in a traffic stop, which is the purpose of this study. Traffic stops are conducted when violations of the Illinois Vehicle Code are observed by officers. At-fault drivers and drivers involved in single vehicle crashes or multi-vehicle crashes (3+ vehicles) are statistically more likely than not-at-fault drivers to be the subject of a traffic stop based on a violation of the Illinois Vehicle Code. This study does not recognize the diversity of drivers on the roadway in our community and continues to provide an inadequate representation of the driving population in the assigned benchmarks.

The Normal Police Department remains committed to protecting the citizens in our community, those living and working here along with those drawn to the area to enjoy the multitude of recreational activities offered. The Department remains committed to the use of sound police strategies based on probable cause and the judicious use of police discretion.

**Response Provided by the Study Team**

We thank Normal Police for their careful review and thoughtful comments.

We are providing some additional detail on the benchmark calculations for added context. Part I Appendix C of this report describes the calculations in detail. Limitations are also discussed in Part I of the report.

As the agency accurately stated, we used crash reports of the not-at-fault driver in two-vehicle crashes within the Normal Police's jurisdiction to generate the benchmark. The benchmark is intended to represent the driving population, not a risk-adjusted population (adjusted by the risk of a traffic stop). The not-at-fault driver in a two vehicle stop has been used in other benchmark studies and is intended to approximate a random sampling of drivers who happen to be in the area. This method is not without limitations, however, as discussed in Part I of the report.

The benchmark did estimate that 95% of drivers were from within 119 miles of Normal, but each ZIP code was given weight equal to its representation in the crash reports from Normal Police, so the benchmark is specific to Normal rather than Central Illinois. The resulting benchmark estimated approximately 39% of the driving population was from Normal, 25% from Bloomington, 6% from ZIP codes immediately surrounding Normal and Bloomington, and <1% for each other ZIP code within 119 miles.

Ultimately our goal is provide the most accurate data as possible, within the constraints of our available data, and we strive to refine and improve the traffic and pedestrian stop benchmarks each year.
